participated in the project

AI4YOUTH MEDIA LTT: TRAINING IN ARTIFICIAL INTELLIGENCE FOR MEDIA PROFESSIONALS

in Belgrade, Serbia

from 08/06/2026 to 10/06/2026

About the project

The activity was a three-day transnational LTT held in Belgrade from 08.06.2026 to 10.06.2026 within the AI4Youth Media project. It focused on practical use of AI in media, including AI tools, prompting, generative AI ethics, research, visual and audio production, multimedia content creation, automated workflows, group work, presentations and peer feedback.

The tasks of Nida BAŞER

Participants attended training sessions, took part in practical exercises, tested AI tools for media production, worked in groups on AI-supported media tasks, created prompts, explored ethical issues, developed simple workflows, prepared short outputs, presented their work and gave peer feedback. They also reflected on how AI can be used responsibly in media, youth work and digital communication.

This certificate has been issued by Radio-Television of Serbia (RTS), Belgrade, Serbia.

Marijana GOJKOVIĆ
Secretary General

Electronically signed on 10/06/2026 09:07 by Sinan Özer

Youthpass is a Europe-wide validation system for non-formal and informal learning within the European Union youth programmes.

The ID of this certificate is EP24-7627-XNG9-XVU5.
To verify the ID, please go to the Youthpass website at <https://www.youthpass.eu/verify> or scan this QR code:

LEARNING CONTEXT

The activities and projects supported by the Erasmus+ programme offer a wide range of valuable opportunities for non-formal and informal learning and competence development. These projects most often include European cooperation and transnational mobility, as well as opportunities for learning through developing youth work or actively contributing towards a common cause. As such, these activities contribute to the lifelong and life-wide learning of the individuals involved.

COMPETENCES DEVELOPED BY NIDA BAŞER

The following summary is the result of a reflection and self-assessment process which took place during and after the project in dialogue with the coach Mark Andrew EGAN – EBU Trainer.

Facilitating learning

Learning was facilitated through a balanced combination of trainer input, practical demonstrations, hands-on exercises, group work and reflection. The trainers introduced each topic with clear examples and then supported participants in testing AI tools directly through media-related tasks.

Participants were encouraged to learn by doing. They practised prompting, explored AI-supported research, created visual and audio content, tested simple workflows and worked in small groups on short media outputs. Peer learning was also used throughout the activity, as participants exchanged ideas, compared results and discussed different approaches.

The programme included regular recap, Q&A and feedback moments to help participants understand the content and connect it with their own professional or youth work context. Group presentations and trainer feedback supported reflection on what was learned and how the skills could be applied after the training.

Designing programmes

The activity supported participants in understanding how AI-related learning activities can be designed for different youth groups and media environments. Participants reflected on the needs, interests and realities of young people, especially in relation to digital media, AI tools, online information, creativity and responsible communication.

The programme followed non-formal learning principles by combining short inputs with practical exercises, group work, discussion, peer exchange and reflection. Participants were not only passive listeners; they tested tools, created outputs, shared experiences and discussed how similar activities could be adapted for young people in their own organisations or communities.

The training also encouraged participants to think about accessibility, different levels of digital skills, ethical risks and the importance of creating safe learning spaces. Through the exercises and feedback sessions, they gained experience in planning AI and media-related activities that are practical, inclusive, relevant and connected to real youth work contexts.

The competence description in this Youthpass certificate is based on the Competence Model for Youth Workers to Work Internationally that was created within the framework of the European Training Strategy. Further information about the competence model is available here: <https://www.salto-youth.net/youthworkers-competence-model/>

Managing resources

The activity helped participants better understand how youth projects and partner organisations work in an international context. Participants experienced the working culture of an Erasmus+ project, including cooperation between partners, shared responsibilities, communication, time management and respect for different organisational backgrounds.

During the training, participants observed how different leadership styles can influence group dynamics, participation and learning outcomes. Trainers and facilitators used a supportive and participatory approach, encouraging questions, teamwork, peer exchange and active contribution. This helped create a safe and open learning environment where participants could test ideas, make mistakes and learn from feedback.

Through group work and presentations, participants also reflected on how responsibilities are shared in a project setting and how coordination, clear communication and inclusive leadership affect the quality of activities. The activity strengthened their understanding of how youth organisations can plan and deliver learning activities that are structured, cooperative and responsive to the needs of participants.

Collaborating in teams

The activity strengthened participants' ability to work in international and mixed teams. During the training, participants took part in group exercises, practical tasks and presentations where they had to share ideas, divide responsibilities, test AI tools together and jointly prepare short media-related outputs.

Teamwork was supported through open communication, peer feedback and mutual support. Participants learned to listen to different perspectives, compare approaches and make joint decisions within limited time. They also supported each other in understanding tools, solving practical problems and improving the quality of their outputs.

The international setting helped participants experience cooperation across different organisational and cultural backgrounds. They practised responsibility, respect, flexibility and coordination while working toward common objectives. This contributed to a better understanding of how effective teamwork supports the successful implementation of youth and media-related project activities.

Communicating meaningfully

The activity supported participants in building positive and respectful relationships with other participants, trainers and partner organisations. Through group work, discussions, feedback sessions and informal exchanges, participants practised active listening, empathy, patience and constructive communication.

The training created a safe and open environment where participants could ask questions, share ideas, express doubts and learn from each other. Working with AI tools also required cooperation and trust, as participants supported one another in testing new methods, solving problems and improving their outputs.

Participants experienced how different personalities, levels of confidence and learning styles can influence group dynamics. They practised giving and receiving feedback in a respectful way and learned how encouragement, openness and mutual respect can improve both the learning process and teamwork in youth and media-related activities.

Displaying intercultural sensitivity

The activity supported communication and collaboration among participants from different countries, organisations and professional backgrounds. Participants worked together in mixed groups, exchanged perspectives and compared how AI and media are understood and used in their own contexts.

The training encouraged respectful dialogue, openness and awareness of different attitudes, communication styles and working habits. During discussions and group tasks, participants practised listening, explaining their views clearly and finding common solutions despite different experiences or expectations.

The international setting helped participants recognise the value of cultural diversity in youth and media work. They learned that successful cooperation requires patience, mutual respect, flexibility and the ability to understand the values behind different behaviours. This strengthened their capacity to work constructively in intercultural project environments.

Networking and advocating

The activity supported participants in understanding the value of networking and partnership in international youth projects. During the training, participants interacted with representatives from different organisations and countries, exchanged professional experiences and discussed possible ways to use AI and media tools in youth work.

Group work, informal exchanges and feedback sessions helped participants build new contacts and strengthen cooperation within the project partnership. They also reflected on how AI-related skills, media literacy and responsible digital communication can increase the visibility and relevance of youth work.

The activity encouraged participants to advocate for youth work by showing how innovative tools can support young people's creativity, employability, participation and critical thinking. It also helped them see how cooperation with media organisations, youth organisations and educational actors can create stronger and more sustainable project results.

Assessing and evaluating

The activity supported participants in understanding evaluation as part of effective youth and media work. Participants reflected on their learning through daily wrap-up sessions, Q&A moments, peer feedback and group presentations. These elements helped them assess what they had learned, what worked well and what could be improved.

During the practical exercises, participants also discussed how digital tools and AI-supported platforms can provide useful information for improving media activities, such as audience reactions, content performance, online engagement and feedback. They explored the importance of using such data carefully, ethically and transparently.

The activity strengthened participants' ability to give and receive feedback, review outputs, draw conclusions from practical work and use evaluation results to improve future learning activities, media projects and youth work practices.

Being civically engaged

The activity supported participants in reflecting on the wider social impact of artificial intelligence and media. Discussions on generative AI ethics, misinformation, bias, transparency and responsible content creation helped participants understand how digital technologies can influence young people, public opinion, democracy and civic participation.

Participants explored how AI-supported media can be used not only for creative production, but also to raise awareness, tell meaningful stories and address social issues. Through group work and discussions, they considered how media content can support inclusion, critical thinking, digital rights and responsible communication.

The activity encouraged participants to take a principled and reflective approach when using AI tools. They discussed the importance of verifying information, avoiding harmful stereotypes, respecting human dignity and promoting ethical media practices. This strengthened their ability to support young people in becoming critical, responsible and active digital citizens.

Other competences

Participants developed additional competences in the practical and responsible use of artificial intelligence in media. They improved their ability to use AI tools for content creation, prompting, research, visual and audio production, multimedia storytelling and simple automated workflows.

They also strengthened their media literacy by critically reflecting on AI-generated content, misinformation, bias, transparency and ethical communication. Through practical exercises, group work and presentations, participants gained confidence in applying AI-supported methods in professional, educational and youth work contexts.

The activity also supported digital creativity, problem-solving and adaptability. Participants learned how to test new tools, compare outputs, improve prompts, present results and reflect on how AI can support creative media work while respecting ethical standards and human-centred values.

PROJECT CONTEXT

PROJECT DETAILS

Below are further details about the project in which Nida BAŞER participated.

AI4Youth Media LTT: Training in Artificial Intelligence for Media Professionals

This activity was a three-day transnational Learning, Teaching and Training activity held in Belgrade from 08.06.2026 to 10.06.2026 within the AI4Youth Media project. The training focused on strengthening participants' practical understanding of artificial intelligence in media and its relevance for youth work, journalism, broadcasting and digital content production. During the activity, participants explored key AI concepts, large language models, prompting techniques, simple AI tool creation, generative AI ethics, AI-supported research, visual and audio production, multimedia content creation, agents, automations, AI workflows, emerging AI trends and the use of AI in media storytelling. The programme combined expert input, practical exercises, group work, peer learning, presentations, feedback sessions and daily reflections. The activity supported participants in developing digital, creative and critical competences, while also encouraging responsible, ethical and transparent use of AI in media-related youth work. | 08/06/2026–10/06/2026 | in Belgrade, Serbia

Main activities: The activity included expert inputs, practical demonstrations, group work and reflection sessions on the use of artificial intelligence in media. Main elements were: introduction to AI and large language models; opportunities and risks of AI in media; prompting techniques; creation of simple AI tools; ethical issues around generative AI; use of AI for research and investigation; AI-supported visual and audio production; prompting for visuals; use of AI tools for fast multimedia content creation; agents and automations; simple AI workflows; AI trends and their relevance for media professionals and youth work. Participants worked individually and in groups on practical media-related exercises, developed AI-supported story ideas, tested tools, presented their outputs and received peer and trainer feedback. The activity also included daily recap and wrap-up sessions to support learning reflection and transfer of skills.

Main outcomes: As a result of the activity, participants improved their practical understanding of artificial intelligence and its use in media production, journalism, broadcasting and youth work. They developed skills in using AI tools, writing effective prompts, creating simple AI-supported outputs, applying AI in research and investigation tasks, and producing visual, audio and multimedia content. Participants also gained stronger awareness of ethical issues linked to generative AI, including bias, transparency, misinformation and responsible use. Through group work and practical exercises, they created AI-supported media ideas, tested workflows, presented their results and received feedback. The activity strengthened participants' digital competence, media literacy, creativity, critical thinking, teamwork and confidence to use AI tools in professional and youth media contexts.

FURTHER PARTICIPATION DETAILS

Related training activities

Participants joined sessions on AI basics, large language models, prompting, generative AI ethics, AI-supported research, visual and audio production, multimedia content creation, automated workflows and AI trends. The training included demonstrations, hands-on exercises, group work, presentations, feedback and reflection sessions.
